OREGON DEPARTMENT OF FORESTRY

INCIDENT MANAGEMENT TEAM

Incident Objectives	1. Incident Name Horse Prairie	2. Date Prepared 9/5/2017	3. Time Prepared 1000
4. Operational Period (Date and Time) 9/5/2017 1800 - 0600 Night Shift			
5. General Control Objectives for the Incident (include Alternatives)			
<ul style="list-style-type: none"> a. Fight fire aggressively and safely; maintain LCES at all times. b. Minimize fire size primarily through the use of direct tactics and a staffed night shift where possible. c. Keep fire South of Olalla Creek, West of Doe Creek, North of Middle Creek, East of Union Creek d. Maintain and build positive relationships with impacted landowners, public, and cooperating agencies. e. Maintain strict financial records and fiscal and equipment accountability. f. Act in a respectful and professional manner around the community. g. Protect tribal, cultural, archeological, and sensitive plant sites by coordinating with Resource Advisors. h. Provide for initial attack and assistance as requested on new and emerging incidents. 			
6. Weather Forecast for Period			
See attached weather forecast			
7. General Safety Message			
<ul style="list-style-type: none"> *Anticipate and look for changes in weather and fire behavior *Initiate all actions based on current and expected fire behavior *Communicate hazards and mitigation measures to all personnel *Stay hydrated

Fire Weather Forecast

FORECAST NO: 12
PREDICTION FOR: Tuesday Night Shift
SHIFT DATE: September 5-6, 2017
TIME AND DATE
FORECAST ISSUED: 1300 September 5, 2017

NAME OF FIRE: Horse Prairie
UNIT: Douglas Forest Protection Association

Incident Meteorologist: Mary Wister
Cell #: 240-778-5303

Weather Discussion...Fire Weather Watch for T-storms Producing Abundant Lightning Wednesday...

The smoke inversion remains strong. The increasing winds aloft and instability have done little to improve conditions today. The smoke will linger through the night, especially in the valleys. Otherwise, temperatures will be mild and there will be better humidity recoveries tonight. Northwest winds less than 7 mph will diminish overnight. A low pressure system off the California Coast will send a weak disturbance across southwest Oregon tonight, and there may be a brief shower after midnight. The timing of the system to approach southwest Oregon is slower than anticipated, but scattered showers and thunderstorms Wednesday through Thursday are expected. The best potential for showers and thunderstorms at Horse Prairie will be Wednesday night through Thursday morning.

Tuesday's Weather:

Partly Cloudy. Areas of smoke. NW winds 3-8 mph. Max Temps: 85-90. Min RH: 25-30 percent.

Weather Forecast for Tonight:

Weather.....Partly cloudy. Areas of smoke. A slight chance of a brief shower overnight.
Min Temperatures.....60-65.
Max Humidity.....60-65 percent above 2000 feet. 70-80 percent below 2000 feet.
Winds (20FT).....Northwest 2-6 mph...becoming downslope/downvalley 2-5 mph after 2000.
Winds (Ridgetop).....Northwest 3-7 mph...becoming variable (mainly East) 2-5 mph after midnight.
Haines Index.....4 (Low).
CWR (> 0.25").....0%

Outlook For Wednesday:

Weather.....Increasing Clouds. A slight chance of showers and thunderstorms in the morning. A chance of showers and thunderstorms in the afternoon and overnight. Some storms may bring heavy rain, hail, and gusty/erratic winds.
Max Temperatures....80-85.
Min Humidity.....38-45 percent.
Winds (20FT).....Northwest-North 2-6 mph with the strongest winds in the late afternoon.
Winds (Ridgetop).....Northwest 4-8 mph with the strongest winds in the late afternoon .
Haines Index.....4 (Low).
CWR (>0.25").....20% during the day. 40% at night.

Extended Outlook for Thursday-Saturday:

THURSDAY...Mostly Cloudy. A chance of showers and thunderstorms. Storms may bring heavy rain, hail and gusty winds. Cooler. Highs 72-78. Lows 58-65. Northwest-North winds 5-10 mph.
FRIDAY through SATURDAY...Mostly Cloudy. A slight chance of showers or thunderstorms. Breezy winds possible. Highs 67-73. Lows in the 50s. West-Northwest winds 8-12 mph with gusts to 20 mph.

FIRE BEHAVIOR FORECAST

FORECAST NUMBER: 08	TYPE OF FIRE: Wildland
FIRE NAME: Horse Prairie	OPERATIONAL PERIOD: Sept. 5, Night Shift
DATE ISSUED: Sept. 5, 2017	TIME ISSUED: 1000
UNIT: DFPA, Central Unit	SIGNED: <u>Mike Haasken</u> <i>MH</i>
	Typed/printed: Mike Haasken

INPUTS

WEATHER SUMMARY: .DISCUSSION... The weather pattern is changing, and the air mass is becoming more unstable. Cumulus clouds could turn into towering cumulus in the afternoon. It will remain unseasonably hot with low humidity today. The predominant winds for night shift will be from the northwest with winds speeds less than 10 mph. A low pressure system off the California Coast is tracking into southwest Oregon and will have the energy and moisture to bring scattered showers and thunderstorms Wednesday afternoon and overnight.

TOPOGRAPHY: Very steep ridge and valley topography with Table Mountain on the north and Cow Creek on the southeast part of the fire. Elevation ranges from 3,300' on Table Mountain to 800' in Cow Creek. Elevations increase above Cow Creek on the south end of the fire to 2,600'.

OUTPUTS

FIRE BEHAVIOR

GENERAL: Fuels are timber with a brush and litter understory and grass and brush fields. Fire Behavior has been extreme with running, crowning and spotting up to ½ mile. Some runs have been downhill with predominantly northerly winds. A rotating column with fire whirls were observed in late afternoon on the Div. T burnout a few days ago. The burn period has been 24 hours. Heavy smoke from this fire and others in southern Oregon have slightly suppressed temperature and slightly elevated relative humidity, but the fuel moistures are so low that fire behavior hasn't been affected, especially when the afternoon wind blows.

Forecasted Indices: For Late Afternoon, early evening before shift change.

1 hour fuel moisture: 4% (-1); **10 hour fuel moisture:** 5% (-1); **100 hour fuel moisture:** 7% (same); **1000 hour fuel moisture:** 10% (same); **Energy Release Component:** 70 (+2); **similar to Stouts Creek and Cable Crossing ERC**; **Probability of Ignition: Shaded due to smoke:** 50%; **Unshaded:** 70%

Expected Fire Behavior: Expect moderate rates of spread and flame lengths with torching and possible crown runs and spotting up to ½ mile. **Firewhirls are possible due to unstable air.**

Timber Understory (TU 5): 8-10' flame length and Rate of spread of 10-15 ch/hr on a 40% slope (5 mph eye level wind).

Shrub (SH 2): 6' flame length and Rate of spread 10-15 ch/hr on a 40% slope (5 mph eye level wind)

SPECIFIC: Divisions P,A,M,Y and T north: Minimal fire behavior, smoldering in heavy fuels.

Division Q: Minimal fire behavior except for new spot fires.

Division S: Possible active burning along entire Division from last night's burnout and in new possible spot fires across the line.

Division T South: Possible active burning in Sections 35 & 36 south of Cow Creek.

AIR OPERATIONS: Air operations may be hampered by heavy smoke. Sunset at Myrtle Creek is 7:42 PM tonight and sunrise tomorrow is 6:45 AM.

SAFETY: Night shifts can be especially difficult; many areas of the fire will experience Lower intensity fire behavior and lead may lead firefighters to a sense of complacency. Stay Alert, and Maintain Situational Awareness. This fire was very active last night and today south of Cow Creek on the east end, and there are still areas of the fire that have the potential for ACTIVE fire behavior.

Miscellaneous Category.**

ASH PIT HAZARDS

Ash pits are an inherent and hidden risk to wildland firefighters that can cause severe burns and injuries. Ash pits are created when organic combustibles consume underground and empty space is created that is imperceptible from the surface.

- Environmental factors that increase the risk of ash pit formation after a wildfire:
 - Extensive root systems of trees and shrubs.
 - Deep duff or peat, the organic layer covering mineral soil.
 - Landscapes that have once been cultivated or manipulated by heavy equipment, old dozer piles, sawmills, timber sale yards or decking areas.
 - Small rodent holes that have become filled with decadent combustible debris, beaver holes near dams and stream beds, badger and coyote dens.
 - White ash is sometimes an indicator of ash pits as are swarms of hovering insects.
 - With the sun behind the suspected ash pit, look for small nearly translucent smokes that dissipate quickly above the ground
 - Ash pits often give off the smell of incomplete combustion or of creosote burning.
- Mitigation measures to consider:
 - Identification of high risk landscape.
 - Identify and flag all hazardous discovered ash pits.

Have an idea? Have feedback? Share it.

Safety Analysis of Tactical Actions (215A)

Incident Name:				Date and Time Prepared:				Operational Period:					
Horse Prairie				9/5/2017				Night 9/5/2017					
TACTICAL HAZARDS													LCES MITIGATION
	A/M		P		Q	S	T		Y				
Indirect Fireline					X	X	X						Establish LCES. Insure that communications between lookouts and line resources are maintained. Escape Routes are identified and reevaluated continuously.
Downhill Fireline					X	X	X						Follow downhill line standards. Bring fire with you. Insure lookout can see entire area. Identify safety zones and escape routes before starting work. Use page 9 of Incident Response Pocket Guide. Establish LCES.
Underslung Fireline					X	X	X						Cup trench. Post lookout that can see all areas of under slung line. Establish LCES.
Mid-Slope Fireline					X	X	X						Insure that lookouts can see ALL area of mid slope line as well as areas upslope of mid slope line. Establish Trigger Points and reassess as fire or weather conditions change. Establish LCES.
Frontal Assault					X	X	X						Identify thresholds for reassessment. Establish LCES.
No Anchor Points					X	X	X						Find/construct safe, effective anchor before engaging. Establish LCES.
Extreme Conditions (Spotting, Wind)	X		X		X	X	X		X				High potential given because of low live fuel moisture and high probability of ignition. Anticipate. Identify thresholds for reassessment, monitor weather. Establish LCES.
Heavy Equipment					X	X	X						Do not work down slope below heavy equipment. Establish communications with operator. Post lookout for rolling debris. Be aware of loose soil and rock. Establish LCES.
Air Ops: Multi Aircraft	X		X		X	X	X		X				Insure that all personnel are at least 500 feet from bucket or retardant drops. Utilize air attack. Establish LCES.
Hazard Trees/Snags	X		X		X	X	X		X				Assess, Identify, Communicate, Isolate, Mitigate. Establish LCES.
Hazardous Materials													Utilize the Incident Response Pocket Guide. Identify and isolate any suspected hazardous materials. Notify supervisor and warn others in area. Keep your distance. Establish LCES.
Unburned Area Unknown Fires	X		X		X	X	X		X				High potential for re-burn in brush and conifers preheated by earlier burn. Blowdown areas keep a close eye on. Post lookouts. Watch for increase in burn activity. Monitor weather for change in RH and or wind conditions. Establish LCES.
Transportation	X		X		X	X	X		X				Drive defensively with headlights on, seatbelts fastened. Stay to the right side of the road. Yield to uphill traffic and flaggers. Drive slowly and watch out for the other person. Establish LCES.
Communication	X		X		X	X	X		X				Establish LCES. Insure that communications between lookouts and line resources are maintained. Escape Routes are identified and reevaluated continuously.
Steep Terrain Gravity Hazards	X		X		X	X	X		X				Do not work crews above or below each other. Post lookouts for rolling material. Watch footing in loose or wet soil and rock. Do not work below heavy equipment. Establish LCES.
Environmental Hazards	X		X		X	X	X		X				Bees, Snakes, Bears and other animals are in the area. Carry medical kits for those with allergic reactions, do not harass or instigate any confrontations with animals, warn others of presence. Poison Oak - Preventative measures, locate, isolate, mitigate.
Structures							X		X				Follow page(s) 12 - 16 of Incident Pocket Response Guide. Establish LCES.
Transfer of Command													Make sure you understand your assignment. Know who your supervisor is and who is working for you. Do not assume. Re-brief all resources.
Span of Control					X	X	X						Adhere to Span of Control Guidelines-5:1. Ensure Overhead is sufficient for operation and identify chain of command. Ensure everyone receives a briefing. Retain control at all times.
Falling Operations	X		X		X	X	X		X				Post road guards. Have a falling boss who can be in contact with crews working in the area. Use qualified Fallers.
Power Lines						X	X						Watch for down power lines and poles. Identify, isolate and report. Notify supervisor and warn others in area. Keep your distance.
I.A.	X		X		X	X	X		X				Follow the 10 and 18, LCES - before engaging, re-evaluate for each new start!

HEALTH AND SAFETY MESSAGE

SAFETY starts with ***YOU***

We are **ALL** accountable for **SAFE** behaviors

INCIDENT: Horse Prairie		DATE: 9-5-2017	Operation Period: Night
Major Hazards and Risks:			
Complacency	Driving	Falling Trees	Fatigue
<u>Fire Order of the Day – Be Alert. Keep Calm. Think Clearly. Act Decisively.</u>			
<u>Complacency:</u> Avoid the “Been there, Done that” attitude. Every time you start a saw, every time you swing a tool it is an accident waiting to happen. Take your time and stay focused on the task at hand.			
<u>Driving:</u> We had a CLOSE CALL yesterday; PLEASE slow down, stay on your side of the road, “expect the unexpected” around every corner. We have a job to do BUT let’s get there in one piece.			
<u>Hazard Trees:</u> Weakened root systems. Identify, flag, communicate and avoid, until the hazard can be mitigated.			
<u>Do Not</u> under estimate small diameter trees.			
<u>Mop-Up:</u> Ensure hazard tree removal has occurred prior to entering area. Wear eye protection. Use hearing protection when working around pumps. Report all hazard tree’s and watch for hot stump holes. REVIEW 6 Minutes for Safety ASH PIT HAZARDS.			
<i>It is better to get out five minutes too soon than five seconds too late. Timeless Tactical Truths</i>			
Watch Out Situation of the Day		FATIGUE & COMPLACENCY: It has been a long and busy summer of fighting fire; fatigue can be a major contributor in whether or not you finish well.	
		Fatigue leads to complacency, and complacency leads to poor decisions. Monitor yourself and your crew for fatigue, and deal with it before fatigue deals with you.	
		Good hygiene practices, adequate hydration, eating plenty of fruits and vegetables, and getting adequate rest as soon as you can in an incident are four easy ways to mitigate fatigue symptoms.	
		Challenge yourself to focus on the task at hand, maintain a positive attitude, continue to work toward the objectives, and encourage fellow workers to adhere to all the safety fundamentals.	
		Employ the “Buddy System”. Take care of yourself, take care of your buddy, and take care of your fellow fire fighters and others on the firefighting team.	
11.UNBURNED FUEL BETWEEN YOU AND THE FIRE			

Incident: Horse Prairie

Thunderstorm Safety Plan

September 5th, 2017

In the event of a significant thunderstorm event affecting the Horse Prairie Incident, the following actions will be implemented:

1. The Safety Officer will address the safety concern at shift briefings, through safety messages, and informational sharing with Section Chiefs.
2. Thunderstorm safety guidelines from the IRPG page 21 and information from 6 Minutes for Safety Thunderstorm Safety handouts will be provided in camp and on the fire line.

The 30/30 rule will be observed: If you see lightning, and hear the thunderclaps follow in less than 30 seconds, take the following storm precautions seriously.

A) Take shelter in a vehicle. No suitable buildings/yerts are located at the ICP.

B) Do not group together.

C) Avoid seeking shelter beneath a tree.

D) Do not resume work in exposed areas until 30 minutes after storm activity has passed.

3. The IMET will monitor the development of significant thunderstorm activity in the vicinity of the incident and the ICP.
4. The IMET will request incident communications to make a radio announcement to fire line DIVS when the thunderstorm is approximately 30-60 minutes away from the incident or the ICP.

Section Chiefs at the ICP will be responsible for insuring this information is communicated to their subordinates and assigned resources.

Kellie Carlsen – Safety Officer Oregon Department of Forestry Incident Management Team 3

Working Around Inmates

Since 1951 The Oregon Department of Forestry (ODF) has utilized inmate labor to support wildland fire suppression efforts statewide. Standards have been established to protect the public and maintain order within the inmate work program. There is an expectation that security standards will not be compromised. This expectation extends to contractors, volunteers, and other agency and non-agency staff working on ODF managed fires.

You will recognize inmates by the orange stenciling on their clothing with the words "inmate" and the name of the institution that they came from. Inmates are rigorously screened before they are eligible for the work program. Violent crimes, sexual crimes, arson, and murder will keep an inmate from qualifying. Inmates working for ODF are typically highly motivated, trained, and look forward to learning new skills and giving back to local communities. They will not be left unsupervised or unaccounted for more than 30 minutes while on the fire line. While in fire camp, inmates are continuously supervised by DOC and ODF staff. It is ok to be friendly and speak with inmate workers, but here are some things you need to know:

- Inmates are not authorized to possess anything not provided by the Oregon Department of Forestry or Department of Corrections that is required for their work activity or sustenance. **Any items not issued by ODF or DOC is considered contraband.** Examples of contraband are cigarettes, chew, drugs, alcohol, firearms, non-stenciled clothing items, matches, lighters, sticks, animals, money, cell phones, or other people's items. Providing contraband to an inmate can in some cases result in a Class C, B, or A felony.
- Inmates should not be allowed access to computers, tablets, phones, fax machines, non-issued mobile radios, vehicle keys, facility keys etc.
- Enjoy light conversation with inmates but avoid sharing deeply personal information. Also do not engage in trying to solve an inmate's personal problems. Trained correctional counselors and security staff are hired to help inmates solve their problems. Feel free to express gratitude for the hard work that they do.
- Staff, contractors, and volunteers should not provide any type of gift or do any type of favor for an inmate. This includes making phone calls, mailing letters, post cards, emails, text messages or posting Facebook messages/pictures for inmates. Remember: **NO GIFTS, NO FAVORS.**
- Be aware of the Federal Prison Rape Elimination Act (PREA). It is a violation of Federal and State law to expose yourself to an inmate, engage in voyeurism, or have any sexual contact with an inmate. Professional boundaries are expected at all times. Sexual topics of discussion or jokes around inmates is inappropriate. Dress and act appropriately around inmates.
- Reporting- when you see an inmate acting strangely or doing/saying something that is clearly inappropriate do not hesitate to speak with the nearest Corrections Officer, or Forestry Crew boss.
- If an inmate is injured during the course of his duties, respond as you would for any other person and communicate with DOC security staff immediately thereafter.

When Inmates are working for the Oregon Department of Forestry they are learning technical skills, work ethic, problem solving skills and social skills that can help them become productive citizens when they are released. Please help us maintain a secure and positive inmate program by adhering to these policies and laws.

HORSE PRAIRIE FIRE

MOP UP STANDARDS

September 5th, 2017

Objective: The Horse Prairie Fire is to be mopped-up to a standard which the likelihood of the fire escaping the containment lines unlikely. The standards below can be flexible and should be applied based on physical conditions present, considerations for firefighter safety, and the expertise of the Incident Management Team (IMT) as long as the objective is achieved. These standards apply to all lands within the fire perimeter.

- Grid the green out to 300 feet from the fire perimeter for two burning periods
- Mop up 100% into hard black a minimum of 200 feet
- Mop up 100% all spot fires, in addition, a route to them will be flagged and the perimeter mapped in GIS
- Line unburned islands and drainages within 500 feet of the perimeter if they are not within the designated mop up area
- Mop up to 500 feet into hard black any dirty burn areas and areas of higher fuel concentrations. The decision to mop up this far into the fire will be based on the expertise of the IMT which is to consider fuels, aspect, wind exposure and firefighter safety
- Heat detecting equipment will be used to detect for hot spots within 200 feet of the perimeter including spot fires
- Complete felling of all snags and fire damaged trees that have been identified as a safety concern, have the potential to cause spotting outside control lines or is within 300 feet of major travel corridors, structures or railroad infrastructure.

Resource Protection on BLM Lands

Horse Prairie Fire

- Avoid application of retardant, foam or other chemicals to waterways unless the fire is deemed a threat to human safety or private property.
- Avoid use of dozers in riparian areas.
- Notify Resource Advisor of location if cultural artifact items are found. Remember, removing cultural artifacts is illegal.
- Locate fire lines to minimize directing water into waterbodies or wetlands.
- There are several Spotted Owl and Marbled Murrelet Nest sites near the current fire area. When planning suppression activities in older forests work with READ's to reduce impacts.
- If drafting out of Olalla Creek, Cow Creek, Union Creek or Doe Creeks use 3/32" screens on draft intake. Screening material and zip ties can be picked up at supply.
